Many problems in mechanics involve deformable domains with moving boundaries. Examples include fluid-structure interaction, free surface flows, flows over soft tissues and textiles, flows involving accretion/erosion, flows through deformable porous media, material forming, shape optimisation, to name but a few.

## **IUTAM Symposium on Fluid-Structure Interaction in Ocean**

Symposium Description: Dynamics of interfaces between fluids and fluids/solids are common in natural and engineered flows. Two-phase flows are key to processes including additive manufacturing, printing, coating, fuel combustion, pipeline transport, nuclear cooling, concentrated solar power, aircraft de-icing, and food preservation, among many others.
