As a current student on this bumpy collegiate pathway, I stumbled upon Course Hero, where I can find study resources for nearly all my courses, get online help from tutors 24/7, and even share my old projects, papers, and lecture notes with other students.

c 2007 by Karl Sigman 1 Review of Probability Random variables are denoted by X, Y, Z, etc. The cumulative distribution function (c.d.f.) of a random variable X is denoted by  $F(x) = P(X \leq x)$ ,  $\hat{a} < \hat{z} < x < \hat{z}$ , and if the random variable is continuous then its probability density function is denoted by  $f(x)$  which is related to  $F(x)$  via

16 Vector Calculus 16.1 Vector Fields This chapter is concerned with applying calculus in the context of vector fields. A two-dimensional vector field is a function  $f$  that maps each point  $(x,y)$  in  $R^2$  to a two-dimensional vector  $hu,vi$ , and similarly a three-dimensional vector field maps  $(x,y,z)$  to

47 composition of left vertical arrows gives  $\hat{\mu}(\hat{\cdot})Id F(X)$ , while the composition of the top, right, and bottom arrows gives  $\hat{\mu}(Id \hat{S} - S) \hat{\mu}(\hat{\cdot})$ . The second equality is proved similarly.
