Kernel Functions and Elliptic Differential Equations in

Kernel functions related to quantum many-body systems of Calogero-Sutherland type are discussed, in particular for the elliptic case. The main result is an elliptic generalization of an identity ...

Source Identity and Kernel Functions for Elliptic Calogero

The kernel function method of Bergman and Schiffer (see (1) and (2)) has recently been used by Colton and Gilbert (see (3) and (4)) in connection with approximation theory and the numerical treatment of elliptic differential equations. In (5) Gilbert and Weinacht have successfully extended the kernel function method to elliptic systems of differential equations.

kernel and then obtain solutions. The Poisson kernel that we used to obtain the solution to the Dirichlet problem associated with the degenerate elliptic equation (1) is of the form: $P(x, v)P(o u, v)$,

Properties of Poisson kernel for a degenerate elliptic

An elliptic curve E is a smooth complete curve of genus 1 with a base point O_E . This base point uniquely determine a structure of algebraic group on E . If k is a finite field, every smooth complete curve of genus 1 has a rational point,

Kernel functions and partial differential equations

Bergman's Kernel function on a class of elliptic partial differential equations in n variables
(*) Summary: In this paper, we apply the Bergman's kernel function theory to solve the boundary value problems for a class of elliptic partial differential equations, and estimate the error.
